

HENRY COMMUNITY HEALTH

Interventional Spine & Pain

New Castle Family & Internal Medicine Forest Ridge • Muncie

1

Getting started

Having a referral may speed up your evaluation, but it isn't required.

Insurance companies typically will require you to complete 4 to 6 weeks of physical therapy before advanced procedures.

Share any available imaging (X-ray or MRI) results with our providers before your appointment.

2

Understanding your pain

Your first appointment is an evaluation where we'll:

Gather your medical history.

Review symptoms and what increases (or eases) your pain.

Work with you to create a customized care plan.

What to expect

Minimally invasive care at Henry Community Health

Henry Community Health's Interventional Spine and Pain team specializes in minimally invasive care treatments that relieve pain and restore function.

3

Personalized treatment

Some of our advanced care options include:

- Epidural steroid injections
- Medial branch blocks and radiofrequency ablation
- Spinal cord stimulation
- DRG therapy
- VIA Disc® NP
- Intrasept procedure
- Kyphoplasty

4

Life after care

Some people feel better fast, and others need to try a few things—and that's okay.

Our providers work with you until we find a treatment that delivers pain relief.

- Outcomes vary depending on your symptoms and severity.
- Repeat injections or procedures may be needed.
